

Monthly Safety Training

KNOW THE BASICS.

Identify two exits, avoid elevators, and ensure fire extinguishers and smoke alarms are accessible, tested, and ready to use.

PREVENT VEHICLE FIRES.

Routinely inspect wiring, brakes, and cargo securement; common semi-truck fire risks include overheated brakes and leaking fuel.

RESPOND THE RIGHT WAY.

If a truck fire occurs: call 911, use a dry chemical extinguisher, stay upwind, and never re-enter the vehicle.

PRACTICE PREPAREDNESS.

Treat drills like real events; maintain stocked emergency kits with essentials like water, food, flashlights, and first aid supplies.

KNOW HOW TO REACT.

In a violent situation, call 911; run if possible, hide if you can't, lock or barricade doors, and as a last resort, fight to survive.
